QuickVue® Chlamydia Quiz

Circle the correct answer

This quiz is an educational tool intended to assist facilities in evaluating their operators' understanding of the QuickVue Chlamydia test procedure. This quiz is not intended to be used as sole evidence of operator training or competency. Facilities are responsible for ensuring the quality of the testing performed by their operators. When testing controls or patient specimens, follow the current package insert instructions and/or procedure card included in the kit.

1. How often does the manufacturer recommend that external controls be run on the kit?
   a) Once every 20 tests
   b) Once per each new shipment of kits
   c) Every first sample tested each day
   d) With each new lot or shipment of kits, once for each 25-test kit, and as otherwise required by your laboratory’s procedures

2. At what temperature do the kits need to be stored?
   a) 2-8°C (refrigerated)
   b) 15-30°C (room temp.)
   c) 2-30°C (refrigerated or room temp.)
   d) –20°C (frozen)

3. What specimen type is used for this test?
   a) Endocervical specimen only
   b) Endocervical and urine specimens
   c) Urine specimens only
   d) Endocervical for females and urethral for males

4. What is the read time for this kit?
   a) 10 minutes
   b) 12 minutes
   c) 15 minutes
   d) 5 minutes

5. Can the test be read after the read time?
   a) No
   b) Yes, up to 10 minutes after the read time
   c) Yes, up to 5 minutes after the read time
   d) Yes, any time after the read time

6. How long can the swab be stored at room temperature or refrigerated prior to testing?
   a) The specimens must be used immediately
   b) 8 hours
   c) 6 hours room temperature; 72 hours refrigerated
   d) 72 hours

7. Can transport media be used with this test?
   a) Yes, only Stuart's Media
   b) Yes, only saline
   c) No, transport media interferes with the test
   d) Yes, only Viral Transport Media

8. How many drops of extracted sample are needed to perform the test?
   a) 5 drops
   b) All of the extracted sample
   c) 3 drops
   d) 4 drops

9. What should be used to collect the specimen?
   a) Any type of swabs
   b) Dacron swabs only
   c) Cotton tipped swabs or a cytology brush
   d) The swabs provided in the kit (rayon tipped) or a cytology brush (not provided)

10. Why are two swabs provided in each tube of the kit?
    a) The first swab is used to remove excess mucus from the exocervix and the second swab is used to collect the endocervical sample
    b) Extra swab is provided if needed to collect another sample
    c) To collect two endocervical samples and send one swab to the lab and use the other swab to run this test
    d) To collect two endocervical samples and use both swabs to run this test
